INTRODUCTION

SHIKU INFRA PRIVATE LIMITED

is an infrastructure Company which has provided high quality building and road construction services since 2021 is recognized among the well experienced players in the field of building road and infrastructure.

SHIKU INFRA PRIVATE LIMITED

Construction is an accomplished manager in itself offering a wide range of services. We offer complete design-build experience and work regularly with many design, and engineering firms as consultants. We provide start to finish advice and expertise to enhance and complete any project. We work to develop specific project requirements, schedules and deadlines that serve the client and the project.

SHIKU INFRA PRIVATE LIMITED Construction has a proven track record of completing quality projects on time and on budget.

Operates on the team concept and our many skilled and experienced staff and field team members have established a standard of excellence that is well recognized in the construction industry. We perform commercial, industrial and institutional projects involving construction, new buildings, additions and renovations. As a general contractor we self perform foundations, masonry, carpentry, metal studs, drywall and acoustical ceiling work. Our office staff includes highly trained and experienced business, engineering and technical experts who provide oversight and support for each project. This team concept is the basis for our hands-on, proactive approach which helps us produce the most important result of every job, our client's satisfaction.

Customer First

SHIKU INFRA PRIVATE LIMITED

Classification of Training is committed to provide a complete range of training required by its employees to perform their assigned responsibilities. This includes orientation training; job/equipment related training, managerial, quality system training and refresher training.

Determining Training Needs – All employees are annually assessed by their managers to determine adequacy of their existing training/qualification, and to propose what additional training they require.

SERVICES & SOLUTIONS

National Highway Road construction

National Highways form backbone to any State and India maintains a remarkable network of such highways. We've helped the country immensely in its endeavors to maintain a fine connectivity with rest of the country by taking up and finishing construction works of National Highways. With decades of experience, expertise and required workforce, we've been consistently supporting the cause of national highway construction in INDIA.

Interstate Road Construction

INDIA have a smooth network of roads and effective connectivity among them which has largely been possible due to construction firms like ours. We have constantly been developing, upgrading and maintaining interstate roads by timely completing construction activities for a better passage among the INDIA Suburbs.

Express Highway

Besides successfully constructing single and double lane highways, our range has been allowing us to take up and finish Express highways in all over INDIA. Unlike every other road projects, a far more expertise and technicality goes into the construction of express highways. The task is finished with desired dexterity and timely manner.

SERVICES & SOLUTIONS

1. Excavation Services

Site Preparation: Clearing, grading, and leveling the land for construction.

Foundation Excavation: Digging trenches or holes for building foundations, basements, or utility installation.

Trenching: Digging trenches for pipelines, drainage systems, or electrical conduits.

Dredging: Removing sediment from water bodies to maintain depth or improve navigation.

2. Grading and Leveling

Rough Grading: Reshaping the terrain to prepare the site for construction.

Finish Grading: Ensuring the surface is smooth and has the correct slope for landscaping or paving.

3. Land Reclamation and Erosion Control

Soil Stabilization: Using methods like geotextiles or compacting to prevent soil erosion and enhance load-bearing capacity.

Erosion Control: Installing silt fences, sediment basins, and other features to manage stormwater and prevent soil erosion.

4. Road and Highway Construction

Cut and Fill Operations: Removing soil from high areas and filling in low areas to create a level base for roads or highways.

Compaction: Ensuring that the soil is compacted and stable enough to

SERVICES & SOLUTIONS

support the weight of roads or infrastructure.

5. Utility Installation

Underground Utilities: Digging trenches and laying pipes or cables for water, sewage, electricity, and gas.

Stormwater Management Systems:

Constructing drainage ditches, culverts, or retention

6. Demolition and Removal

Land Clearing: Removing trees, shrubs, and other vegetation to prepare for construction.

Debris Removal: Clearing debris from demolished structures or previous construction work.

7. Earth Retaining Structures

Retaining Walls: Building retaining walls to hold back soil on steep slopes or prevent erosion.

Slope Stabilization: Using techniques like soil nailing or rock bolting to stabilize natural or man-made slopes.

8. Material Hauling and Disposal

Haul Away Excavated Material: Transporting excess soil, rocks, or debris from construction sites.

Delivery of Fill Material: Bringing in materials such as gravel, sand, or topsoil to fill in areas or improve soil quality.
